

SPM International launches new subsidiary for Marine & Offshore

SPM International, Sweden now announces the launch of its new subsidiary SPM Marine & Offshore. Based in the Netherlands, the new company will address the condition monitoring needs of the global marine and offshore industry.

In an increasingly competitive business climate, the global marine and offshore industry is fully committed to safe and sustainable operations and to optimizing maintenance strategies. But reducing risk while keeping costs down is a difficult task. The only viable route to increased profitability is through operational excellence and maximized equipment availability and performance - around the clock.

Safety is critical and in marine and offshore environments, on-board safety is closely linked to equipment reliability and performance. Ensuring that regulatory requirements are met and that staff and equipment are safe and productive is of primary importance. Compliance has become a central theme in all marine and offshore activities. Environmentally sound operations with reduced energy consumption and minimized pollution is also a top priority.

SPM Marine & Offshore manages condition monitoring challenges and delivers turnkey solutions - integrated, flexible and scalable. The SPM service portfolio covers the entire process; from planning, installation and commissioning to global service, support and training. SPM Marine & Offshore performs condition-based maintenance and machinery diagnostics according to class requirements. Targeted to monitoring critical equipment, SPM solutions contribute to ensuring continuous improvement in safety - to life and health, environment and property.

SPM Marine & Offshore provides effective condition monitoring solutions for all types of rotating equipment typically found onboard drilling rigs, heavy lift/pipelay vessels, platform supply vessels and gas carriers. SPM solutions give early warning of machine problems and provide both vessel crew and shore-based personnel with the information needed to make informed, confident decisions on operations and maintenance. Owner and operator friendly, SPM products empower stakeholders to customize, monetize and run a reliable condition monitoring solution for single units or entire fleets.
